

Art.Nr. 193000055200

The PLx1.4 extends the focal length of 35 mm PL mount lenses 1.4 times. Recommended starting at T-Stop 2.8.

The extender features high-index, low-dispersion glass to ensure the highest possible resolution and contrast with minimal optical degradation.

The optical design is optimized for digital cameras with telecentric ray path at the sensor!

Compatibility is achieved with a deep-set optical assembly that accepts lenses with deep protruding rear elements. The PLx1.4 is also designed to mount to any digital cinema camera with a native PL mount.

Technical Data

Max. image input \varnothing (mm)	32.0	Lens Mount	PL
Max. sensor \varnothing (mm)	34.5	Camera Mount	UMS PL*
Magnification	1.4x	Diameter (mm)	78.0
Max. input T-Stop	2.8	Length PL to PL (mm)	25.8
Light drop (stops)	1.0	Weight (kg)	0.4

*without UMS F Mount
